

WEB DEVELOPMENT COMPANY

Full-Circle Python Web Development Company

**Transform Ideas Into
Successful Business Tools**

Grandsoft Is an outsourcing software development company specified on designing and developing complex Internet services and business solutions. GrandSoft gathered highly qualified IT-specialists focused on successful results.

Our speciality is custom design and implementation of IT-solutions for business which helps improve the efficiency of processes, increase profits, build relationships with customers and partners using IT technologies.

Partnership with GranSoft means:

FULL-CIRCLE DEVELOPMENT

we implement project from an idea to a full-fledged working product.

EXPERIENCE

we have been for over 10 years in commercial development, constantly improving our skills and following IT innovations.

FLEXIBLE APPROACH

phased development gives possibility to monitor the project and implement changes if necessary.

PRIORITY ON THE MAIN

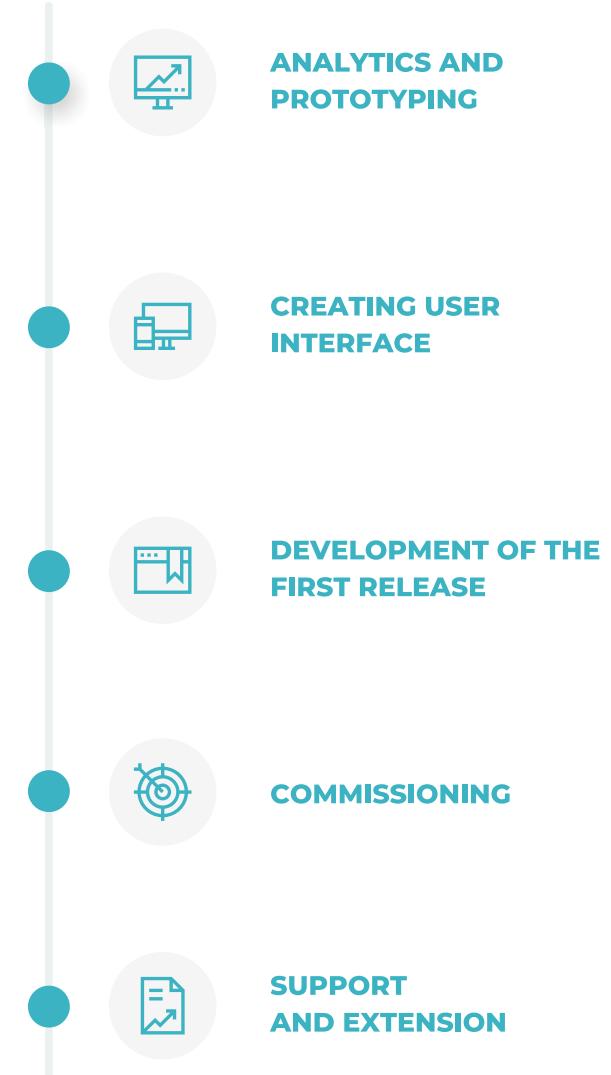

the most important functions for your business will be done first.

TECHNOLOGY

we create clean, high quality, adaptive code, using an individual approach.

COMPLIANCE WITH THE DEADLINES AND SUPPORT

we complete each development stage according to the approved schedule and help customers understand technical details of the project.

Our Expertise:

**BUSINESS
SYSTEMS**

**API FOR
MOBILE APPS**

**COMPLEX
WEB-SERVICE**

Our business analytics are highly qualified and have high expertise in the analysis and the construction of business processes.

This allows us to:

quickly grasp the essence of the business problem and identify the need;

formulate the concept of the solution;

using various techniques of business analysis, arrange the concept into a technical task;

advise programmers and QA-specialists during product development;

discuss business issues with the customer in “the same language”.

Our design team solves problems, not just "draws buttons".

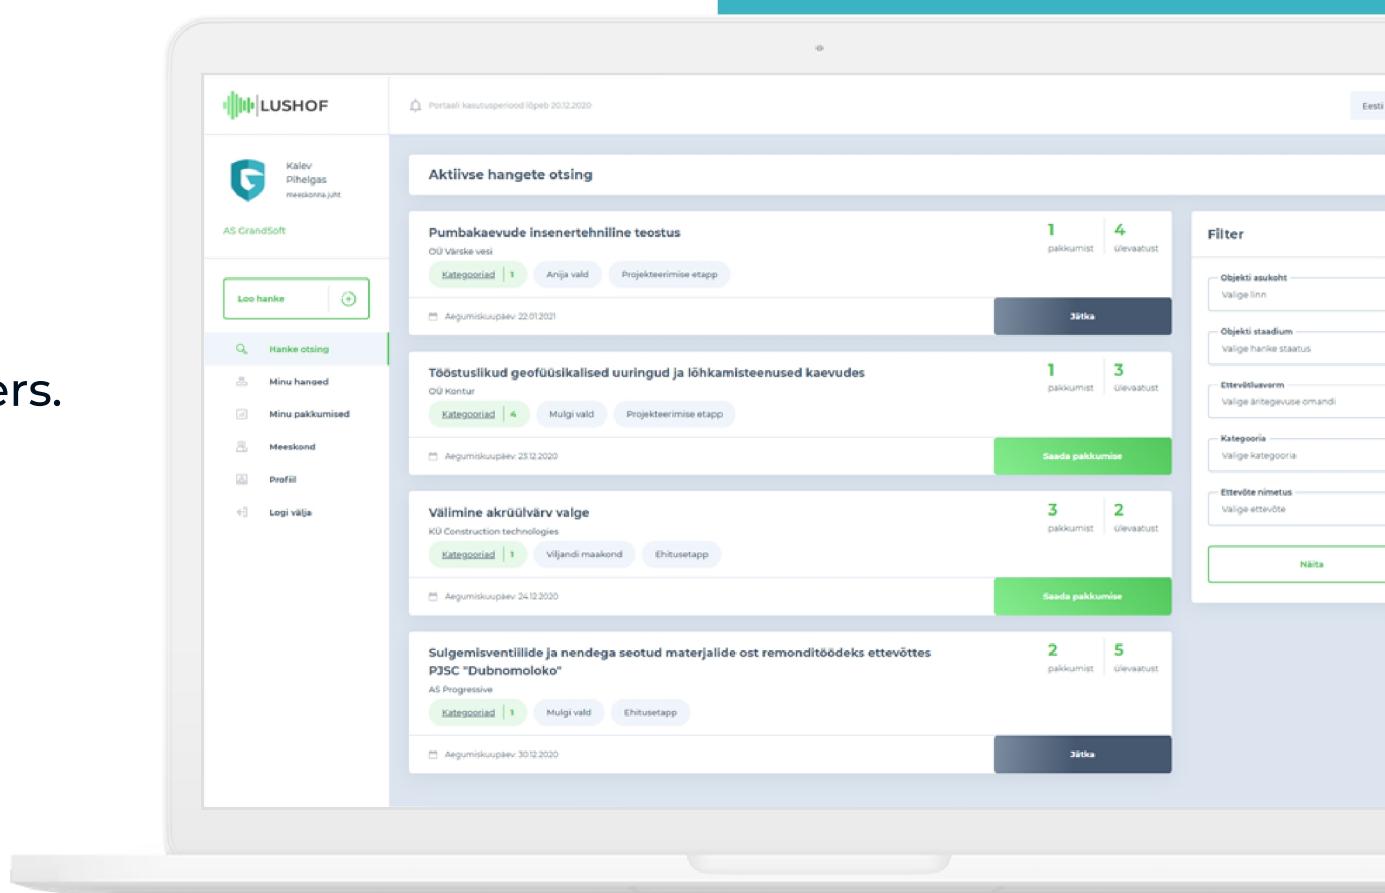

Thankfully continuous teamwork, our designers can clearly and simply solve business problems. We know how to create a simple and friendly interface, so the user on a subconscious level, without additional explanations, understands how to solve his problem using your service.

Our Cases. Real-life success stories of our clients

Lushof

is a convenient portal for searching and creating tenders.

We actively involved business analysts in the development of the web service: a deep and comprehensive analysis of the niche allowed us to create all the necessary tools for portal users.

Our Cases. Real-life success stories of our clients

Lushof

a new level of tendering

We have developed a functionality with which the creator of the tender can upload a ready-made table of volumes in Microsoft Excel file format and correct it if necessary, which significantly speeds up the process of creating a tender.

Our Cases. Real-life success stories of our clients

Lushof

a new level of tendering

Contractors enter their offers directly into the tender volume table and the service automatically determines the cheapest one. This enables the creators of the tender to compare prices for items of interest and analyze the real cost of a construction project.

Our Cases. Real-life success stories of our clients

Lushof

a new level of tendering

After the completion of the tender, the customer can select the contractor directly in the comparative table of offers, focusing on the requirements he needs. The service also automatically generates tables of orders for each selected contractor, which greatly facilitates the work of the tender's creator, if he has several of them. All tables generated by the service can be downloaded in Microsoft Excel file format.

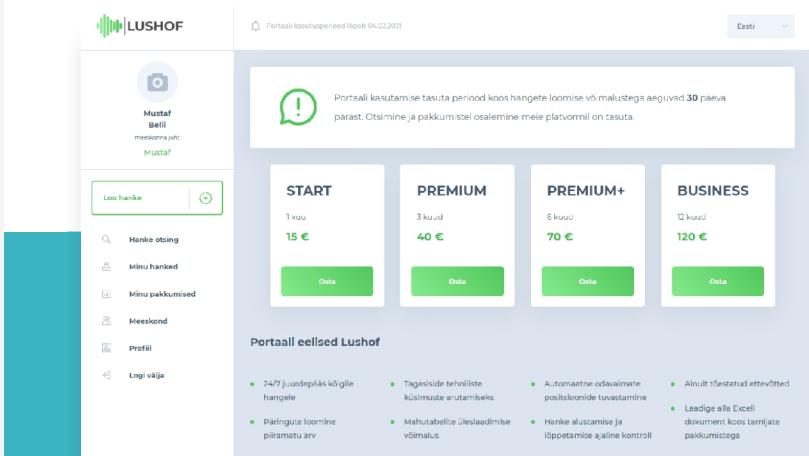

Our Cases. Real-life success stories of our clients

Lushof

a new level of tendering

We've integrated Twilio into Lushof to authenticate users' phone numbers, and Stripe to securely pay for the portal services.

The screenshot shows the Lushof portal interface. On the left, there's a sidebar with a user profile for 'Mustaf' and navigation links like 'Loo hank', 'Hank eotsing', 'Minu hanked', 'Minu pakkumised', 'Meeskond', 'Profil', and 'Logi välja'. The main area displays a message about a trial period ending on April 04, 2020. Below it, four pricing plans are listed: START (1 kuu, 15 €), PREMIUM (3 kuud, 40 €), PREMIUM+ (6 kuud, 70 €), and BUSINESS (12 kuud, 120 €). Each plan has a green 'Osta' button. At the bottom, there's a section titled 'Portaali eelised Lushof' with bullet points about features like 24/7 support, payment processing, and document management.

AIHR

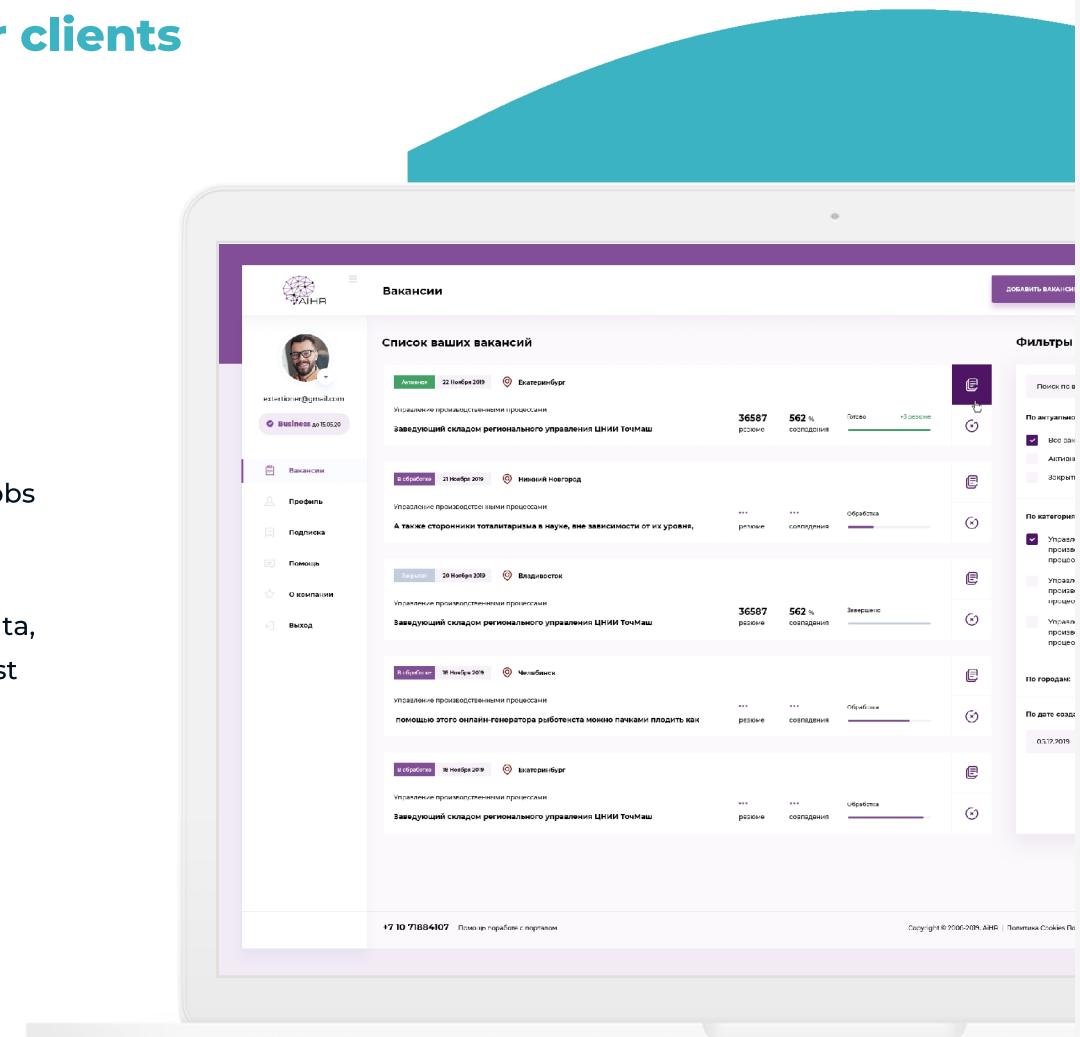

- a unique Service for Recruiting

We have developed an innovative HR-tool, which automatically selects relevant resumes for vacancies and shows applicants a list of matching jobs for their search criteria. This is the "intelligent part" of the app, during the development we used elements of machine learning: the service independently processes thousands of resumes, examines the entered data, analyzes matches and displays the result in a ranked list from most to least relevant options.

More features of the service:

highload-class product: the system is capable of processing thousands of requests per second;

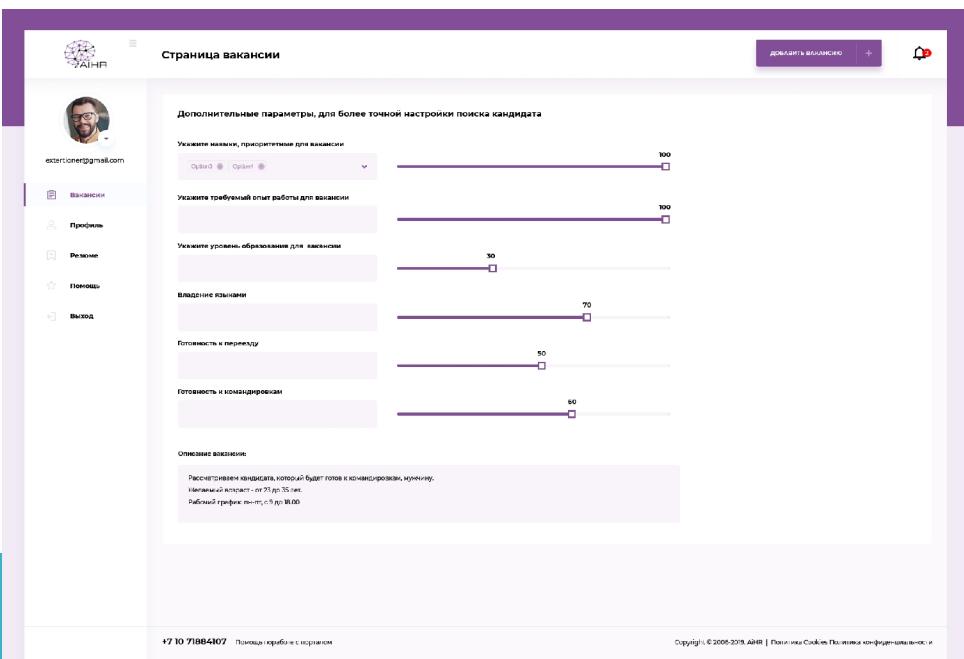

chatbot integration: chatbot tests potential candidates for a vacancies;

OkeyHotel

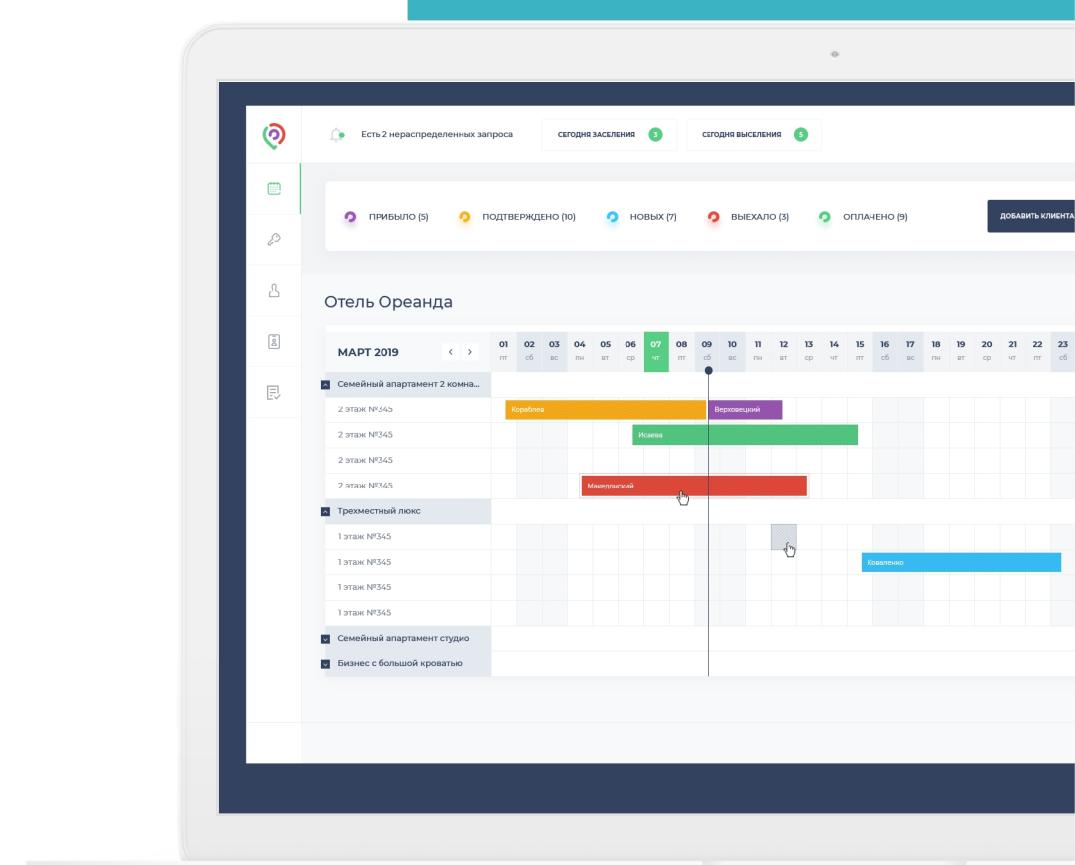

Hotel Management System

We have developed an innovative HR-tool, which automatically selects relevant resumes for vacancies and shows applicants a list of matching jobs for their search criteria. This is the "intelligent part" of the app, during the development we used elements of machine learning: the service independently processes thousands of resumes, examines the entered data, analyzes matches and displays the result in a ranked list from most to least relevant options.

More features of the service:

embedded online booking form: we have implemented a universal integration mechanism and developed a "smart" search algorithm for available rooms.

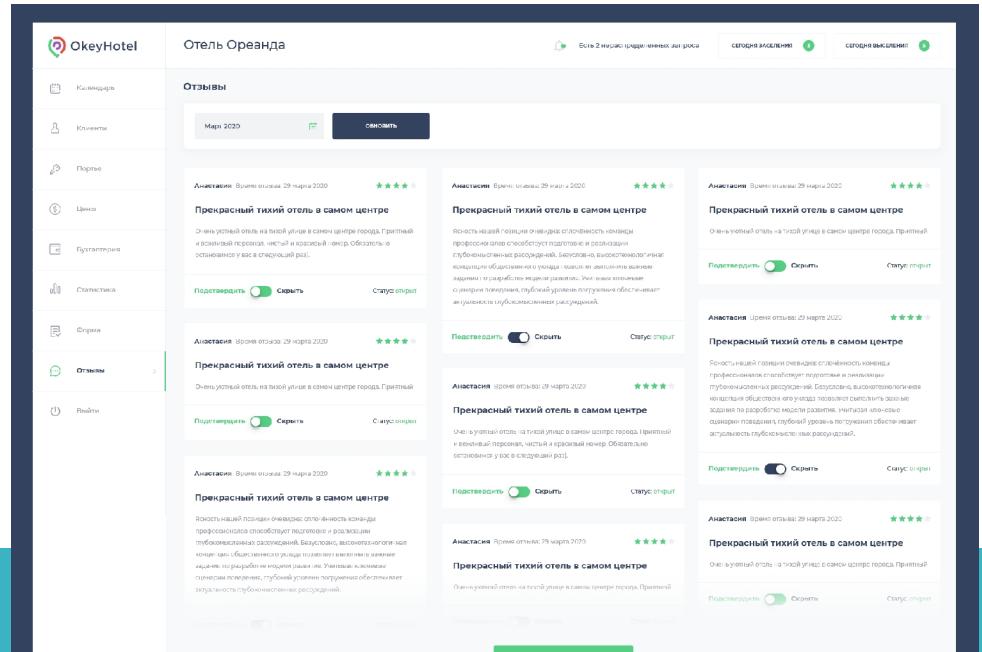

a parser for reviews from different platforms, based on asynchronous requests, which crawls sites in real time and collects reviews.

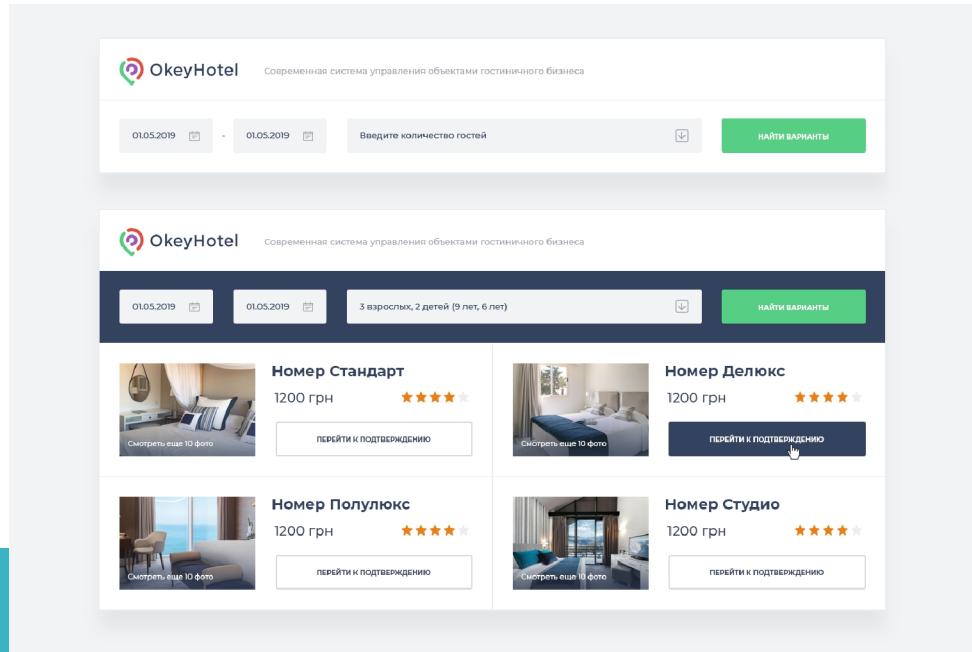

Our Cases. Real-life success stories of our clients

OkeyHotel

Hotel Management System

The screenshot shows the 'Отзывы' (Reviews) section of the OkeyHotel system. On the left, a sidebar lists various management modules: Календарь, Клиенты, Порядок, Цены, Рутинизация, Статистика, Формы, Отзывы, and Виды. The main area displays a grid of reviews from March 2020. Each review includes a star rating, the reviewer's name, the date, and a short summary. For example, one review from 'Анастасия' on March 29, 2020, says: 'Прекрасный тихий отель в самом центре'. Below each review are buttons for 'Подтвердить' (Confirm), 'Скрыть' (Hide), and 'Статус: открыт' (Status: open). A green 'Найти' (Find) button is at the top right of the grid.

The screenshot shows the 'Современная система управления объектами гостиничного бизнеса' (Modern system for managing hotel business objects) interface. It features a search bar with dates '01.05.2019 - 01.05.2019' and a field 'Введите количество гостей' (Enter the number of guests). Below this, a grid of room types is displayed. Each row contains a photo, the room type name, price, a 5-star rating, and a 'Найти варианты' (Find variants) button. The room types shown are: Номер Стандарт (Standard Room), Номер Делюкс (Deluxe Room), Номер Полулюкс (Luxury Room), and Номер Студио (Studio Room).

InCheck

Website Monitoring Service

Incheck is a service for website owners and system administrators that allows them to monitor the health of web resources 24/7.

InCheck is a highload-class product and it is capable of handling tens of thousands of requests. We used our own algorithms for balancing server loads with the ability to predict future loads and intelligent analysis of page performance.

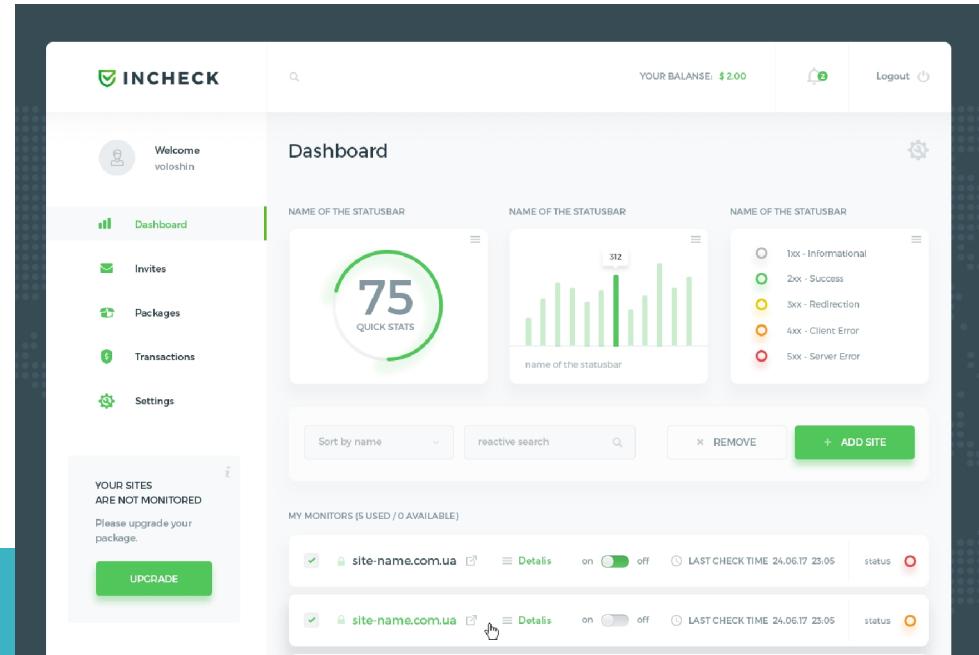

We have developed an uninterrupted communication system, which ensures that notifications are timely sent to the user. For extensive processing of statistical data, we used a hybrid of object-relational and network database types, replication, partitioning, and smart caching. All statistics are instantly displayed in a user-friendly Incheck interface.

JetFox

Food Delivery Service

JetFox is a marketplace for restaurants, a highload service that is friendly for users and attractive for business owners. An important detail of such a service is a simple and intuitive interface: we have created a convenient and colorful catalogue for two groups of users (business owners and clients).

We have developed a unique control panel for business owners with the ability to independently add their new items and special offers. We have implemented a system of "likes" and created an algorithm for selecting promotions based on user preferences to increase customer loyalty.

Business owners can see the complete statistics for the selected period. Even extensive statistics loading doesn't affect the speed and performance of JetFox.

ДЛЯ ВЛАДЕЛЬЦЕВ БИЗНЕСА

Чем Реактивный лис полезен вашему бизнесу?

- Мы живем в мобильных телефонах ваших постоянных и потенциальных клиентов.
- Используя наши технологии, вы оставите позади своих конкурентов.
- Наша база пользователей растет с каждым днем, развивайте Ваш бизнес вместе с нами!
- С нами Вы сможете с реактивной скоростью информировать клиентов об Акция и Новинках.

- Комментарий

На левом и правом краях экрана отображаются списки других доступных пицц и бургеров с изображениями и ценами.

Our Cases. Real-life success stories of our clients

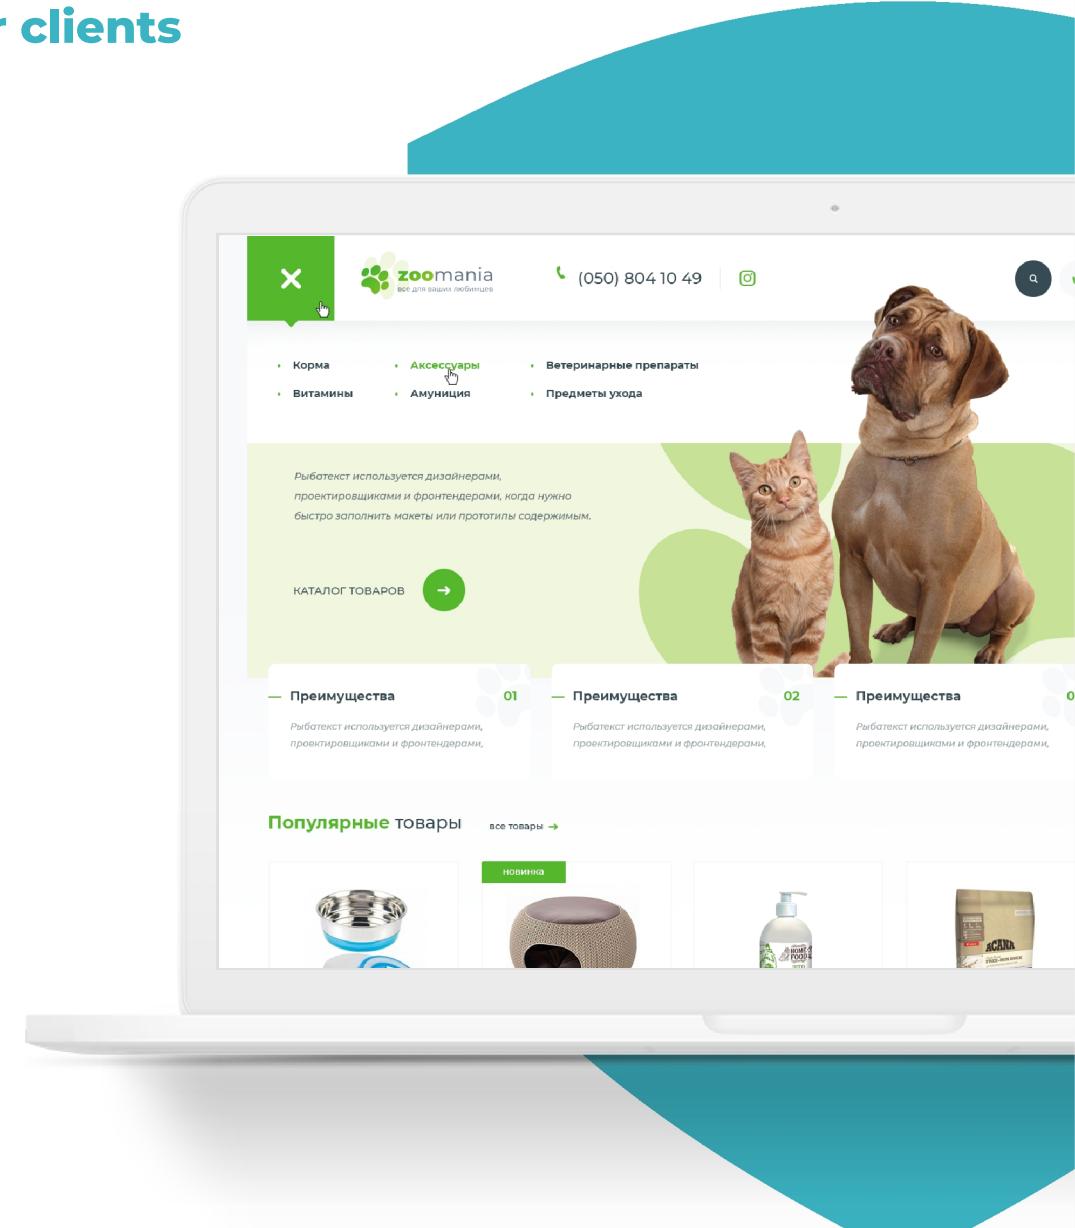

ZooMania

E-commerce Store with Ability to Scalable

We have developed a custom online store with an architecture that implies further expansion to a marketplace. One of the features of the project is the possibility of auto-ordering for suppliers: the service examines the leftovers of goods and their popularity, calculates the required quantity and forms an order.

We have implemented a microservice that analyzes competitors' sites, compares prices and dynamically generates the most attractive price for ZooMania users.

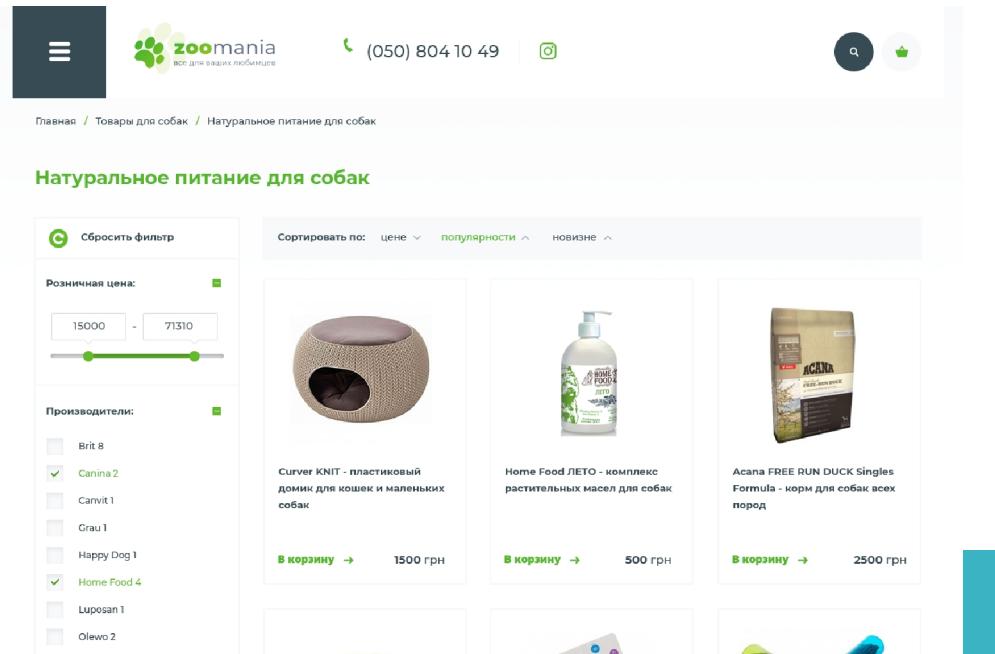

ZooMania is a highload service and withstands high traffic and order flow.

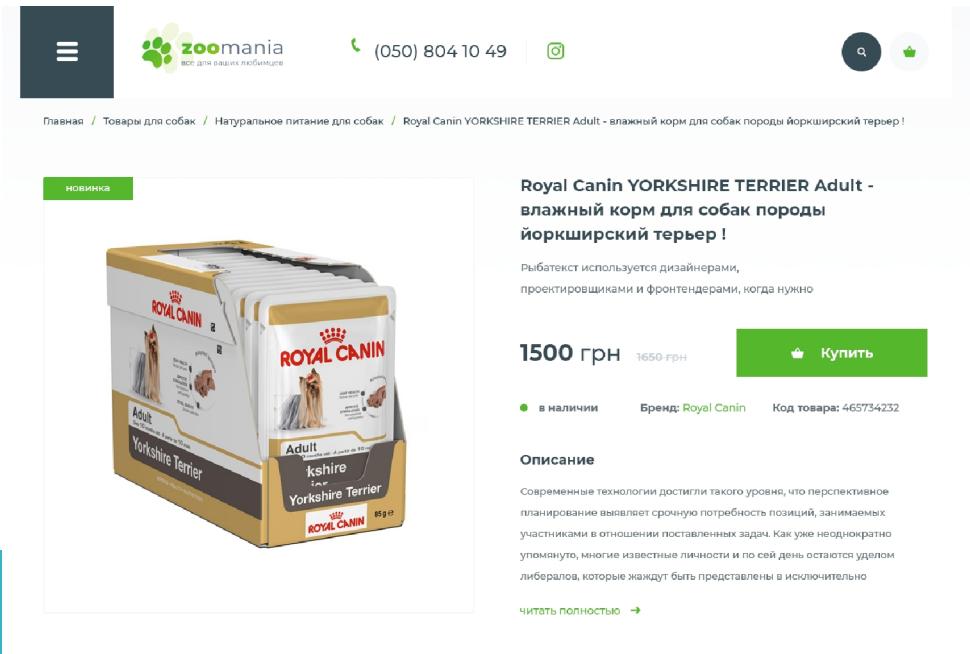

Our Cases. Real-life success stories of our clients

ZooMania

E-commerce Store with Ability to Scalable

The screenshot shows a search results page for "Натуральное питание для собак". The interface includes a sidebar with filters for price (15000 - 71310), manufacturer (Canina 2 selected), and a "Сбросить фильтр" button. The main area displays three products: a plastic cat/dog house, a bottle of Home Food LETO oil, and a bag of Acana dog food. Each item has a "В корзину" button and its price (1500 грн, 500 грн, 2500 грн) next to it.

The screenshot shows a product detail page for "Royal Canin YORKSHIRE TERRIER Adult - влажный корм для собак породы йоркширский терьер". The product image shows a box of Royal Canin Yorkshire Terrier dog food. The page includes a "новинка" (new) badge, a price of 1500 грн, a "Купить" (Buy) button, availability information ("в наличии"), brand ("Бренд: Royal Canin"), and a product code ("Код товара: 465734232"). A detailed description of the product is provided at the bottom.
